

FACT SHEET

Chapter G21: Car Parking and Traffic

Proposed changes to this chapter

Chapter G21: Car Parking and Traffic is a generic chapter that relates to car parking, traffic, access and servicing requirements for all development in Shoalhaven.

The majority of the proposed changes to this chapter are operational changes to clarify the position of Council, for example:

- Broadening the content of the chapter to include traffic as well as parking provisions.
- Allowing use of AS2890 for car park layout design in catering for people with a disability (as per existing Council resolution).
- Providing detailed requirements for preparing traffic studies.

Changes are also proposed to existing car parking provisions as follows:

- Changing the length of drive-through queues at take away food and drink premises (double the maximum queue length from 12 to 24 vehicles).
- Changing the parking requirements for childcare centres.

Please refer to the Table of Changes at the beginning of the chapter for a detailed list of the proposed changes.

Further information
